PROFESSIONAL SUMMARY

Senior software engineer with close to ten years on back-end systems. I work mostly in Python and C#, with JavaScript/TypeScript across the stack, on AWS and GCP. I take a service from API design to production: microservices, data pipelines, CI/CD and monitoring. Fully remote for the last seven years.

CORE SKILLS

Languages: Python, JavaScript, TypeScript, C#, Java, PHP, SQL, Bash

Back-end: Flask, .NET Core, Node.js, Laravel, Spring, REST APIs, GraphQL, WebSockets, microservices

Front-end & mobile: React, Angular, Vue.js, Flutter, Ionic

Cloud & DevOps: AWS (Lambda, SQS, SNS, API Gateway, ECS/Fargate, EC2, RDS, S3, CloudWatch), GCP (Dataflow, Cloud Functions, Pub/Sub), Docker, Kubernetes, Jenkins, GitLab CI, CI/CD, Linux

Data & practices: PostgreSQL, MySQL, MongoDB, Oracle, Elasticsearch, Apache Beam; Agile/Scrum, automated testing (PyTest, xUnit), code review, observability

Education: Universidad Mariano Galvez — Systems Engineering, 2013–2020 (did not finish)

Spoken languages: Spanish (native) · English (professional)

PROFESSIONAL EXPERIENCE

Senior Backend Engineer — Confidential

Jul 2026 – Present

Remote

- Design and build back-end services and REST APIs in Python and JavaScript/Node.js.
- Write event-driven microservices on AWS with Lambda, SQS and API Gateway, plus containerized services.
- Run the cloud infrastructure, deployments and CI/CD, with automated tests and monitoring.

Python & C# Cloud Engineer — BioIntelliSense, Inc.

Jul 2021 – Mar 2026

Remote (United States)

Cloud systems for healthcare data: back-end services, data processing and day-to-day platform reliability.

- Built and maintained back-end APIs in Python (Flask) and C# (.NET Core) for healthcare data and system integrations.
- Ran Apache Beam pipelines on GCP Dataflow for large, low-latency data flows.
- Deployed containerized microservices on AWS ECS/Fargate, with Lambda, API Gateway, SQS and SNS.
- Added automated tests with PyTest and xUnit and improved CI/CD, so releases shipped faster and broke less.

Lead Full-Stack & DevOps Engineer — Geducar

Feb 2019 – Jun 2021

Guatemala City, Guatemala · Remote

Education platform used by schools and universities. I led the technical side: architecture, infrastructure and delivery.

- Led the web, mobile and back-end work with Laravel, Node.js, Vue.js, React, Flutter and Python.
- Built real-time chat and notifications used by thousands of users, and cleaned up legacy code.
- Managed AWS (EC2, ECS/Fargate, Lambda, S3, CloudWatch, autoscaling) and CI/CD, **cutting cloud costs by around 30%.**

Full-Stack Engineer — PIXTIG

Sep 2016 – Feb 2019

Guatemala · web, mobile and enterprise work for several clients

- Wrote back-end apps in PHP/Drupal and reporting systems in Java with Spring and Oracle, on WebLogic.
- Built hybrid mobile apps with Ionic and Cordova against JWT-secured APIs, through testing and release.

OPEN SOURCE & COMMUNITY

- **Digifact SDK** for Guatemalan e-invoicing, in Python, PHP, JavaScript and C#. **cui-gt**, a national ID validator, on NPM and PyPI.
- Speaker and organizer at **FLISoL 2026**. Member of ASITI, a Guatemalan free-software group.
